Claims 1-50 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The description states at various places that the pins are "independently deployable." Then on page 13 it is stated that "one or more rows of pins can be selectively deployed." This appears to be a contradiction. If a row of pins are deployed each pin in that row is not independently deployable. It is unclear which contradicting portion of the description the claims refer back to.

Claims 1-50 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what is meant by "each pin independently deployable". This is not understood since each pin in a single row is not independently deployable relative to the other pins in the row.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 7-9, 22-23, 27-31, 42-44, and 47-50 are rejected under 35 U.S.C. 102(b) as being anticipated by Blazek.

Blazek 3,5 are blocks, 10 are apertures, 17 are channels, 16 are inlet holes, and 12 are a plurality of pins. Statements of intended use have not been accorded any patentable weight; ie., how a workpiece is engaged by the pins or how fluid is administered to the inlet is a matter of intended use that has no patentable significance. In any case, the Blazek device is seen to be capable of performing the non-substantive intended use recited in the claims; ie, fluid can be applied independently to each row of pins.

Claims 51-53 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 4.

Analogous devices are taught by Perrine and Fitzpatrick.
